PROFESSIONAL SUMMARY

Software Engineer with proven expertise in full-stack development, specializing in scalable e-commerce platforms, supply chain systems, and SaaS applications. Demonstrated ability to architect production-ready systems serving 80,000+ users with measurable performance improvements (40-65% optimization). Experienced in React/Next.js ecosystems, PostgreSQL database design, and CI/CD pipeline automation.

TECHNICAL SKILLS

Programming Languages	JavaScript, TypeScript, Python, Java
Frontend	Next.js, React, Redux Toolkit, Tailwind CSS, shadcn
Backend Development	Node.js, Next.js, NextAuth.js, JWT, RESTful APIs
Databases	PostgreSQL, MongoDB, MySQL, Firebase, Prisma, Sequelize
Cloud & Infrastructure	GCS, AWS (Lambda, RDS, S3), Docker, GitHub Actions, Nginx
Architecture Patterns	Feature-Based Architecture, Microservices, RBAC
External Integrations	Resend, WhatsApp API, Google OAuth
Domain Expertise	E-Commerce, Supply Chain, POS Systems, Inventory Management

EDUCATION

University of Moratuwa	June 2022 - Present
<i>B.Sc. (Hons) in Information Technology and Management</i>	<i>Moratuwa, Sri Lanka</i>
· CGPA: 3.5 / 4.0	
· Coursework: Enterprise & Mobile Dev., AI & ML, Object Oriented Analysis, SE Methodologies	

WORK EXPERIENCE

APP360 (Pvt) Limited	February 2025 - August 2025
<i>Software Engineer - Intern</i>	<i>Colombo, Sri Lanka</i>
· Built production features for platform serving 80,000+ users, including inventory management, cashier operations, caregiver scheduling, and attendance tracking	
· Migrated application to Next.js App Router, improving routing and server-side rendering for performance	
· Developed secure auth system using JWT, and RBAC with middleware guards and session monitoring	
· Created reusable UI component library including several features	
· Architected secure document upload system using GCS with signed URLs for time-limited access control	
· Mentored a junior intern on repository hygiene, version control workflows, and UI/UX quality standards	
· Delivered 55+ incremental builds with documented release notes and participated in client-facing UAT demonstrations	
DOC-Q - Online Doctor Bookings	March 2024 - June 2024
<i>Software Developer - Web (Volunteer)</i>	<i>Remote</i>
· Implemented a location-based feature to search for doctors, improving service discoverability and overall user experience	
· Collaborated within a cross-functional team, participating in weekly sync-ups to enhance workflow and team coordination	
· Utilized Node.js, Express.js, Firebase, HTML, CSS, and JavaScript to deliver features aligned with the company's product goals	

PROJECTS

Total Supply - Enterprise Supply Chain Platform

January 2026 - Present

Full-Stack Developer - Personal & Freelance Project

[total-supply](#)

- Architected multi-role platform with 80+ REST API endpoints with e-commerce and service workflows
- Built RBAC system dashboards, middleware enforcement, and admin approval of unauthorized access
- Designed PostgreSQL schema with Prisma ORM relations, reducing query time from 250ms to 87ms
- Integrated Google Cloud Storage with signed URLs and image optimization, reducing costs by 40%

Samwoostore - E-Commerce Platform

October 2025 - December 2025

Full-Stack Developer - Freelance

[samwoohub.lk](#)

- Built production B2B/B2C platform with 80+ REST API using feature-based modular architecture
- Implemented dual authentication (credentials + Google OAuth) with JWT sessions and RBAC
- Engineered CI/CD pipeline Docker multi-stage builds, GitHub Actions, Nginx achieving zero-downtime deployments
- Optimized performance with Redux Toolkit, and React Query caching achieving 40% faster loads

Prompt Copilot - AI Prompt Management Ecosystem

December 2025 - January 2026

Full-Stack Developer - Personal Project

[github.com/prompt-copilot](#)

- Built prompt management platform organization across 5+ platform, REST API with 15+ endpoints featuring dual authentication with Chrome extension and VS Code extension with sidebar webview

Rag Release - Book Publishing Platform

September 2024 - July 2025

Full-Stack Developer - Web

[github.com/rag-release](#)

- Developed book publishing platform streamlining workflows for authors, reviewers, designers, publishers, and readers using serverless AWS infrastructure (API Gateway, Lambda, RDS).

Student Welfare Management System

October 2023 - July 2024

Team Lead & Full-Stack Developer

[ems.vpa.ac.lk](#)

- Led design and implementation of Welfare Management System supporting 4,000+ students, workflows for Mahapola scholarship processing and disciplinary action tracking under mentorship of Loons Lab.

Intern Tracking System

June 2024 - September 2024

Full-Stack Developer

[internify.fit](#)

- Developed centralized internship application management system serving 450+ students

POV Globe - 3D Rotating LED Display

July 2023 - June 2024

Embedded & Web Developer

[github.com/pov-globe](#)

- Engineered POV globe displaying dynamic 3D text on rotating LED sphere

ACTIVITIES & LEADERSHIP

Open Source Contributor, SEF Global (2022-Present)

Hacktoberfest Participant (2022, 2023, 2024)

Microsoft Learn Student Ambassador (2023-2024)

FIT Career Fair, Company Coordinator (2024)

IEEE Student Branch, University of Moratuwa, Member/Coordinator (2022-2023)
